

Exercise 2

You have been asked to improve on the web page you created for NewYou Personal Training. You will use the file you created for Exercise 1. Follow the instructions below to add cascading style sheets to the web page.

1. Using a simple text editor such as Notepad, open the file **Exercise1solution.htm** that you created in Tutorial Project 1. Save the file as **Exercise2solution.htm**. You should still have the **logo.jpg** file.
2. Change the information in the title section to say **Exercise2**
3. Add an inline style to the first <p> tag that changes the font color to darkorange and the font weight to 900.
4. Add the code to insert an embedded style sheet. The style sheet should set the font-family of all <p> tags to Georgia, serif.
5. Create a new file named **Exercise2style.css**. In this new file, add the HTML code that will:
 - a. Insert a comment section that contains your name and Exercise 2.
 - b. Add a style declaration that will set the body tag to a margin of 50px, width of the page to 960px, the font-family to sans-serif and the background-color to #FFE4C4.
 - c. Set the style of all level 2 headings to a color of #00008B and the font-size 2em.
 - d. Set the color to #008000 and the back-ground color to #ADD8E6 for all level 3 headings.
 - e. Add one style declaration that will set the following attributes for the address tag:
 - i. color: #F00
 - ii. text-align: center
 - iii. font-style: italic
 - iv. font-variant: small-caps
 - v. font-weight: 700
 - vi. font-size: 12pt
 - vii. line-height: 24pt
 - f. Set the attributes of the blockquote tag so that the background-color is #FFD700, the width is 600px and the padding is 20px.
 - g. Add a style declaration so that all list item tags (li) have the following attributes:
 - i. text-transform: capitalize
 - ii. line-height: 2
 - iii. color: #008000
 - h. Make sure you save your Exercise2style.css file.
 - i. Switch to the Exercise2solution.htm file and add the code that will link your CSS file.
 - j. Save your Exercise2solution.htm file and open it in a browser.
 - k. Check for and correct any errors.
 - l. Save any changes.

View the results in your browser.

Hints:

Use the book “Web Design Start Here”, Chapter 3 as a reference to creating CSS for your Exercise File.

To link CSS you use the following syntax:

```
<link rel="stylesheet" href="filename.css" />
```

The comment syntax in the CSS file is: `/* information here */`
